DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimers filed on December 21, 2009 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent Application Nos. 10/597703, 10/597678, 10/597624, 10/597683, and 10/597690 have been reviewed and are accepted. The terminal disclaimers have been recorded.

Information Disclosure Statement

2. The examiner notes that the third document listed on the IDS submitted August 3, 2006 is incorrect and is why the document was not previously considered. However, the examiner has determined which document was intended by the applicant (USPGPub 2004/0007597 A1 to Masuzzo et al) and has amended applicant's IDS and considered the reference as such.

Allowable Subject Matter

3. Claims 1, 2, 4-14, 16, 18-23, and 25-37 are allowed as amended by applicant in the claims submitted January 21, 2010.

4. The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to teach or disclose, either singly or in combination, the claimed device of a metering pump system having a storage chamber; a metering chamber movable between a contracted and an

expanded state, wherein movement of the metering chamber from its contracted state to its expanded state results in the metering chamber being placed in fluid communication with the storage chamber in order to receive a volume of fluid product in excess of the desired dose amount; a bleed mechanism for bleeding the excess volume; and an inlet valve mechanism between the storage and metering chambers having an open state which permits fluid flow from the storage to the metering chamber, and a closed state which prevents flow between the chambers; wherein the inlet valve mechanism is adapted so that it remains closed except when the metering chamber moves from its contracted to its expanded state or wherein negative pressure created in the metering chamber is able to move the inlet valve mechanism from its closed state to its open state.

5. The closest prior art of record is Martin (USPN 5,085,351). However, this reference fails to teach, disclose, or render obvious the invention as claimed or described above.

6. Regarding independent claim 1, the closest prior art of record fails to teach among all the limitations or render obvious an inlet valve mechanism which is adapted so that it remains closed except when the metering chamber moves from its contracted to its expanded state. Regarding independent claim 2, the closest prior art of record fails to teach among all the limitations or render obvious an inlet valve mechanism wherein negative pressure created in the metering chamber is able to move the inlet valve mechanism from its closed state to its open state.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
